

HOW DO WE KNOW?

**Scientific information and public policy:
GMOs, pesticides and the demise of bees**

Wednesday, April 2, 1-2:30pm

Laura C. Muir Performing Arts Theatre
Reception to follow

Dr. Mark Winston has spent four decades studying and writing about three related issues: genetically modified crops, the use of pesticides, and the recent tragedy of bees disappearing from hives and fields. Join Dr. Winston as he probes these connected issues and illuminates a way forward for science to more effectively contribute to public discourse.

Mark Winston is Director of Simon Fraser University's Centre for Dialogue.
